

The autonomous quality control operating system for regulated life sciences.

We help you reduce expensive errors and wasted time operating fragmented, retrospective quality control systems.

— THE BIG CHANGE

AI agents are coming to the lab.

Small regulated teams are asking how to use AI agents, and whether to trust them. We help you get there.

— IF YOU WAIT

Labs that don't use AI get left behind.

- **Transcription errors.** Results and calculations get retyped between systems, a recurring pattern in FDA findings.
- **Hours lost.** Moving data, rebuilding context, and chasing approvals by hand.
- **Found late.** Retrospective QC catches problems after they've grown.

— WHERE YOU END UP

Your team gets to do the thinking.

Repetitive work goes to AI agents. Your QC tools work as one platform, and your team decides.

— HOW WE GET YOU THERE

Four products. Each one clears something in your way.

PRODUCT 01 Quality Core Evidence gets rebuilt after the fact. One connected record, so the answer is already there. Document control, training, change control, materials, products and lots, equipment, suppliers, and quality events on one shared model.	PRODUCT 02 Integrations Your systems don't talk to each other. We connect them, so your team stops being the glue. Environmental conditions, QC instruments and equipment, laboratory records, and partners and contractors. Bad data is flagged on arrival.	PRODUCT 03 Agentic Automation Someone has to connect it all by hand. Routine QC work runs for you, with your sign-off. Ask in plain language, review the plan, approve, run. Every action, file, setting, and approval is saved with the run.	PRODUCT 04 Continuous Quality Monitoring Problems surface late. We watch around the clock and flag early. Instrument runs, audit-trail entries, environmental readings, and record completeness, checked against rules you can read.

— YOU STAY IN CHARGE

PixeSci works for you. You make every decision.

PixeSci reads, watches, and recommends. It cannot approve, close, release, invalidate, or sign a record, and that limit is enforced in the software.

— BUILT FOR SMALL REGULATED TEAMS

- SMB biomanufacturers
- Biologics and sterile-product companies
- Quality-heavy biotech startups
- CDMOs and CMOs
- Regulated testing organizations

— WORKFLOW MAPPING

Bring us one workflow. We'll show you.

Show us where your tools, partners, and reviews disconnect. We'll show you how it looks connected, and we're clear about what's live today and what's on the roadmap.

Our core mission is to create a disease-free world by pushing regulated life science companies into autonomous quality control.

PixeSci helps teams track work and produce records for review. Customers still must validate and configure the system, train users, maintain SOPs, and meet their own quality requirements. © 2026 PixeSci.
