

The autonomous quality control operating system for regulated life sciences.

We help you reduce expensive errors and wasted time operating fragmented, retrospective quality control systems.

— THE PROBLEM

You've become the integration layer.

- You move data between systems that don't talk.
- You rebuild context at every handoff and contractor.
- You check conditions and chase approvals by hand.
- You piece together what happened, after the fact.

— WHAT WINNING LOOKS LIKE

Your quality team gets to do the actual quality work again.

Ask your lab what's happening Ask in plain language and get an answer.	Problems surface while they're small You hear about exceptions as they happen.	The evidence is already connected Every record, run, and exception is already linked.	Your team decides, every time Every approval and signature stays with a qualified person.
--	--	---	---

— HOW WE GET YOU THERE

Four products. Each one clears something in your way.

PRODUCT 01 Quality Core Evidence gets rebuilt after the fact. One connected record, so the answer is already there.	PRODUCT 02 Integrations Your systems don't talk to each other. We connect them, so your team stops being the glue.	PRODUCT 03 Agentic Automation Someone has to connect it all by hand. Routine QC work runs for you, with your sign-off.	PRODUCT 04 Continuous Quality Monitoring Problems surface late. We watch around the clock and flag early.
--	---	---	--

— YOU STAY IN CHARGE

PixSci works for you. You make every decision.

PixSci reads, watches, and recommends. It never approves, closes, releases, invalidates, or signs a record on its own, and that limit is enforced in the software.

— BUILT FOR SMALL REGULATED TEAMS

SMB biomanufacturers Biologics and sterile-product companies Quality-heavy biotech startups CDMOs and CMOs Regulated testing organizations

— FAST DEPLOYMENT

A PixSci Node, installed at your site.

We ship you a PixSci Node, set up before it arrives. Your data and workflows stay on hardware at your own premises.

— WORKFLOW MAPPING

Map your QC process.

Show us where your tools, partners, and reviews disconnect. We will show you how to connect them and keep the record.

Our core mission is to create a disease-free world by pushing regulated life science companies into autonomous quality control.

Teams can track work and produce records for review. Customers still must validate and configure the system, train users, maintain SOPs, and meet their own quality requirements. © 2026 PixSci.
